CENTRIC

Architecture brief, 19 November 2026

Centric Governance Central: where it runs and what it touches

CGC is strategy execution software that installs into the customer's own Microsoft 365 tenant. Its data is stored in the customer's SharePoint, and Centric does not host it.

Components

Component	Where it runs	Notes
CGC app	Customer's SharePoint Online	One SharePoint Framework solution
CGC data	SharePoint lists in the customer's tenant	Follows the tenant's region, retention, audit and backup policies
Sign in	Customer's Microsoft Entra ID	No separate accounts
Scheduled jobs	Azure Functions in the customer's Azure subscription	A Centric hosted option exists for customers without Azure; ask what it touches
Dashboards	Native to SharePoint	No Power BI license needed
AI agents	Customer's own Azure OpenAI	In build

What Centric runs

License issuing, Microsoft Marketplace fulfillment, and provisioning of CGC into the customer's tenant on day one. None of these services stores the customer's strategy, KPI or initiative data.

What the customer controls

Control	Held by
Data location	Customer, by tenant region
Who can sign in	Customer, through Entra ID and access policies
Permissions	Customer, through SharePoint and CGC roles
Retention, audit and backup	Customer, through Microsoft 365 policies
Removing CGC	Customer. Lists remain. Switching a module off deletes nothing

What installation needs

- ✓ Microsoft 365 with SharePoint Online
- ✓ A SharePoint administrator to deploy the app
- ✓ Administrator consent for the CGC app registration. Centric sends the exact permission list before installation
- ✓ An Azure subscription for scheduled jobs, or agreement on the hosted option

Assurance

- ✓ Centric Group Inc. is certified to ISO/IEC 27001:2022
- ✓ SOC 2 Type 1 audit of CGC planned for the first quarter of 2027
- ✓ Microsoft Solutions Partner for Data & AI (Azure). CGC is listed on Microsoft Marketplace and co-sell ready
- ✓ No on premises edition: CGC is built for SharePoint Online
